

E2E Project

Smart Excess Food And Clothes Donation System

Team

No	Roll Number	Name
1	23BQ1A05I8	Pundla VenkataLakshmi Satyasri
2	23BQ1A05F7	Neelam Mohana Rupa
3	23BQ5A05I3	Prem Chand Janga
4	23BQ1A05F6	Namburu Gagan Sai

Milestones

Phase	Expectation	Important Dates	Status (TODO/IN PROGRESS/ COMPLETED)
1	Problem identification (real-world/ societal / industry), Problem statement, Modules division, Tech-stack identification, Frontend, Backend, Database, Deployment Platform	26th Dec, 25 to 7th Jan, 26	TODO
2	Functional and non-functional requirement identification, Database design, SRS Document preparation, Use-case Diagram design, UI wireframes (Figma / sketches)	19th Jan, 26 to 24th Jan, 26	TODO
3	Module wise implementations Core features implementation Validation & error handling, Must include features like authentication, file upload/download, Notifications, Dashboard & analytics	23 rd Feb, 26 to 28th Feb, 26	TODO

Milestones

Phase	Expectation	Important Dates	Status (TODO/IN PROGRESS/ COMPLETED)
4	Unit testing, Integration testing, Input validation Security testing, Performance checks	9th Mar, 26 to 14th Mar, 26.	TODO
5	Live application URL, Deployment document, GitHub commit history	16th Mar, 26 to 21st Mar, 26	TODO
6	Final Project Report (PDF), PPT for demo, Complete GitHub repo	23rd Mar, 26 to 28th Mar, 26	TODO

Phase 1

Problem Statement

Large amounts of food and usable clothes are wasted daily due to poor coordination. Edible items often do not reach NGOs on time, while spoiled materials are improperly disposed of, causing environmental issues. The lack of a centralized system leads to inefficient donation and waste management.

The Solution

The Smart Excess Food and Clothes Donation System is a centralized web platform that connects donors, NGOs, and compost makers to reduce wastage and improve coordination. The solution is built on three core pillars:

Item Classification & Sharing:

Donors can post excess food and clothes and mark food as edible or spoiled for proper routing.

Location-Based Access:

NGOs and compost makers can easily find nearby food and clothing listings for quick and efficient pickup.

Communication & Coordination:

Direct calling and real-time notifications enable smooth coordination and timely collection of donated items.

Modules

Module 1: Donor Module

Helps donors post and manage excess food and clothes easily through a simple interface.

Features:

- Post excess food and clothes details quickly
- Classify food as edible or spoiled
- Set pickup location and time
- View pickup acceptance status

Module 2: NGO Module

Enables NGOs to find and collect edible food efficiently for donation.

Features:

- View available edible food
- View food availability by location
- Accept food for donation
- Get pickup details and updates

Module 3: Compost Maker Management Module

Allows compost makers to collect spoiled food for proper processing.

Features:

- View available spoiled food
- Check spoiled food by location
- Accept spoiled food for composting
- Get pickup details and updates

Module 4: Communication Module

Ensures smooth and timely coordination between all users.

Features:

- Enable direct calling between users
- Quick contact access for coordination
- Real-time notifications and alerts
- Smooth pickup coordination

Technologies used

- **Frontend:**

React, Tailwind CSS

- **Backend:**

Node.js, Express.js

- **Database:**

MongoDB

- **Cloud / Services:**

Firebase (Authentication, Notifications), Cloud Storage
